### NOTES.

**SURGEONS** will attend, when called upon officially, to all cases of accident occurring to employes or passengers. In cases of sickness it is the intention to limit medical service to the locality or town where a surgeon resides, unless some urgent necessity exists, for which distinct official authority must be had in accordance with established regulations.

**RAILWAY OFFICIALS** are required to call on the nearest authorized surgeons whenever practicable, when surgical or medical services are needed. When such are accessible, the Association will not be responsible for bills for medical services rendered by any other physician. In the event of a sudden emergency, arising from accident, if necessary proper surgical aid

should be procured until the arrival of a regularly appointed surgeon, when the case should be placed in his charge, and in no case should the service of any but an authorized company surgeon be continued at the expense of the Railway Company or of the Association after such surgeon is able to assume charge of the case.

**BOARDING AND NURSING** are furnished only at our own hospital. We are not responsible for bills incurred elsewhere unless specially authorized or approved by the Chief Surgeon, and then only in critical cases of injury or illness occurring in the discharge of duty.

Above rating is based on trains consisting of loads only and rating is calculated for an average speed of ten miles per hour.

For each car added to number specified above, deduct ten tons from rating of engine; for each car less than number specified above, add ten tons to rating of engine.

Westward trains with two engines will not handle more tonnage than the combined rating of both engines.

In figuring tonnage of the car, less than 1,000 pounds will not be counted; one thousand pounds or more will be counted one ton.

To secure full tonnage rating a fraction of weight of car more than rating must be counted rather than a fraction less.

Train dispatcher will determine rate to be handled when reduction is necessary account of weather condition, except that for temperature alone the following rule will be applied by all concerned:

Reduce rating—5% between 30 above and 20 above; 10% between 20 and 10 above zero; 15% between 10 above and 10 below zero; 25% when temperature is below 10 below zero.

When engines are unable to haul the rating, Engineer will designate to conductors the number of tons to be reduced and will wire the Superintendent why the reduction is necessary. It must be distinctly understood that the responsibility for reducing train below rating of engine must be assumed by the Engineer and not by the conductor.

This rating is made to govern ruling grades only, and will in no manner interfere with the handling of additional tonnage where the grades will permit.

In making up or filling out trains the following rules will be followed as far as practicable:

Solid trains of loads or solid trains of empties.

When trains consist of both loads and empties, loads in the middle with empties divided between the head and rear end of train.

Maximum tonnage for wavy freight trains will be 200 tons less than tonnage for through freights.

Tonnage for time freights will be regulated by bulletin.

Helper Districts—Duluth to Sawyer and Duluth to three miles west of Carlton via either the Second or Third Subdivisions.

**SPECIAL RULES.**

No. 1. Engineman will not be required to consult registers except at initial or starting point. See rule 83A, Book of Rules.

No. 2. Retainers must be used on grades between Iverson and Central Avenue, Carlton and West Duluth Junction, and other grades where in the judgment of the Engineman they are necessary. Conductors are responsible for application of retaining valves on commencement of descent, and for their release at the foot of grade. Such full use of retainers is required as will prevent placing an undue amount of braking on any particular car or cars, and as will afford full opportunity for Engineman to recharge and retain maximum air pressure at all points.

No. 3. Engines backing will not exceed Fifteen (15) miles per hour unless equipped with pilot on rear of tender.

No. 4. To insure personal safety, operators having train orders or messages to deliver to passing trains should stand to the right hand side of train, and avoid standing between tracks, when possible to do so.

No. 5. All Eastward freight trains and light engines approaching Carlton from the West on the Second Subdivision will head in on the North Siding at Carlton.

Westward trains, switch crews or Branch trains will not use North Siding without permission from Dispatcher.

No. 6. Rule D97 is modified to the extent that extra trains may be run with the current of traffic without orders provided they secure a clearance, Form "A," from the operator upon entering upon double track. Operators must secure authority from dispatcher before issuing clearance.

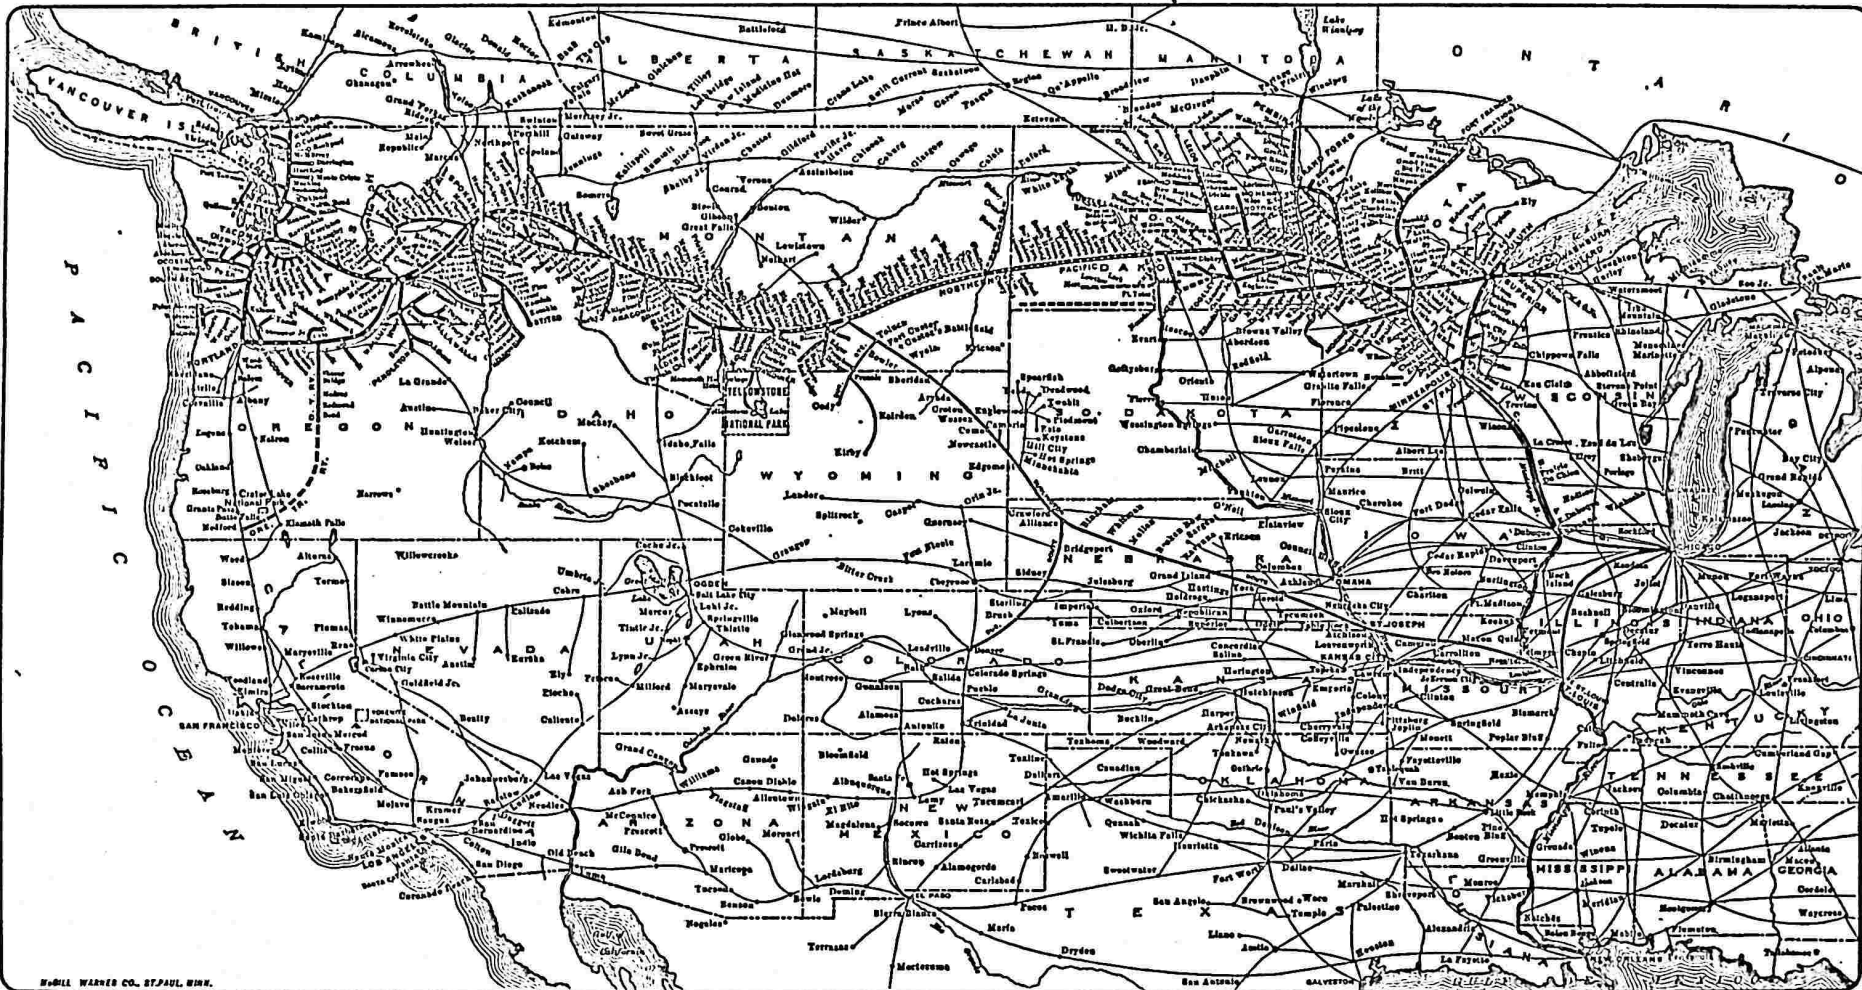

**G. W. ATMORE,**
