Special Instructions No.6

In Effect at 12:01 A. M. Mountain or 105th Werldian Time.

Wednesday, October 8, 1941

These instructions govern Current Time Table. Read carefully and be positive that you have the Current Time Table, also copy of Current Special Instructions.

W. C. SLOAN, Asst. Vice President and General Manager.

> D. S. COLBY. SuperIntendent.

F. R. BARTLES, Assistant General Manager.

P. H. McCAULEY, General Superintendent of Transportation.

SPECIAL INSTRUCTIONS FIRST SUBDIVISION.

(MAIN LINE)

- 1. At Logan-Operators will handle the switch just east of the station platform for all eastward train movements to Low Grade Line, but authority must be obtained from the train dispatcher before lining the switch. When trains are directed by train order to wait for or meet a train at the Low Grade Line switch, it refers to the switch just east of the station platform.
- 2. At Trident—No. 5 track cannot be used across coal hopper at cement plant. On tracks 2 and 3 hold onto enough cars so that engine does not pass the chutes located on these tracks.
- At East Helena—Overhead bridge at cinder track just east of American Smelting and Refining Company ore bins will not clear engines or cars of greater height than 9 feet 6 inches from 3. At East Helena-
- Extra Freight Trains—Bozeman to Logan, will run via Man-hattan; Logan to Bozeman, will run via Powers, unless other-wise instructed by train order.
- 5. Double Track—The normal position of switches at Livingston and Muir are for the eastward track. At West End for the westward track.
- At Muir and West End-Dual control switches at end of

At Muir and West End—Dual control switches at end of double track are electrically operated and also hand-throw switches. To operate by hand unlock power lever and throw in reverse position. Switch can then be thrown with hand-throw lever. When switches are restored to normal position the power lever must also be restored to normal position.

Between Muir and West End—Single track. Interlocking Rules govern except that for movement to single track, trains must not pass an interlocking "Stop" signal without train order authority. TRAIN MOVEMENTS OVER SINGLE TRACK WILL BE GOVERNED BY INTERLOCKING SIGNALS AND RULES AND RULE S-83 WILL NOT APPLY. Switching movements inside the interlocking limits may be made on authority ments inside the interlocking limits may be made on authority from operator at West End, in which case switches will be

thrown by hand. Trains moving on dwarf signal indication must approach signals at opposite end of tunnel at restricted speed.

at opposite end of tunnel at restricted speed.
Proceed dwarf signals indicate the route is set and block clear.
At Muir—Helper engines will not require clearance for movement Muir to Livingston moving with current of traffic if interlocking signal indicates proceed. Operator at West End must obtain authority from the train dispatcher before displaying the proceed indication for this movement. When the eastward dwarf signal at end of double track displays a yellow indication helper engines will go in on westward siding and report on telephone for instructions. Authority must be secured from the train dispatcher before engines leave the spur to make a reverse movement on eastward main track.

dispatcher before engines leave the spur to make a reverse move-ment on eastward main track.

The operator must obtain authority from the dispatcher before lining the remote control switch at Muir for a movement to the westward main track. Such authority will not be given by the dispatcher if there is a train on the westward track that has de-parted Livingston, nor will the dispatcher clear a train at Liv-ingston until the movement is completed after having given per-mission for such a lineur

mission for such a lineup.

When it is necessary to make a move into the siding at Muir and the dispatcher cannot give permission as above outlined, it will be necessary for the crew to handle both the spring switch at west end of the siding and the power switch at the end of double track by hand.

At Bozeman-The switches at end of double track and low line At Bozeman—The switches at end of double track and low line are dual controlled. The normal position of the switch at end of double track is for the eastward track. Normal position of switch to low line is for the main track via Manhattan. To operate switches by hand, unlock power lever and throw in reverse position. Switch can then be thrown with hand-throw lever. When switches are restored to normal position the power lever must also be restored to normal position. must also be restored to normal position.

- 8. Pusher District-Between Livingston and Bozeman and between Townsend and Helena.
- Yard Limits—Tracks between yard limit signs east of Muir and west of West End, will be operated as one yard. Westward trains will not require rear end protection between end of double

track at Muir and west switch of westward siding at West End. Eastward trains will not require rear end protection between end of double track at West End and east switch of crossover at

10. Mountain Grade Operation-

Mountain grade, Livingston to 1400 feet West of M. P. 135. Speed Mountain grade, Livingston to 1400 feet West of M. P. 135. Speed of passenger trains descending seven (7) minutes Muir to Hoppers and thirteen (13) minutes Hoppers to Livingston; six (6) minutes West End to Chestnut and fourteen (14) minutes Chestnut to Bozeman. Light engines and freight trains descending must not exceed one (1) mile in three (3) minutes. Passenger trains must not use less than two and one-half (2½) minutes and freight trains not less than three (3) minutes through Bozeman tunnel. All trains ascending forty (40) MPH Livingston to Muir and thirty (30) MPH M. P. 134 to West End. Trains handling berry, cherry, lettuce or silk specials will be governed by speed of passenger trains descending mountain grades. grades. Air brake tests will be made in accordance with Rule 1063

before leaving Bozeman and Livingston.
On eastward freight trains the retaining valves will be turned up on all loads and one-half of the empties, alternating the

empties.

On westward freight trains with all empty cars, the retainers will be turned up on one-third of the number of cars in train, alternating, beginning at the engine. On trains consisting of loads and empties, retainers will be turned up on all loads and one-third of the empties, alternating the empties.

Retainers will not be used on No. 651's train when handling not a exceed 1500 tens.

to exceed 1,500 tons.

Eastward freight trains will carry ninety (90) pounds train line pressure between West End and Livingston and westward freight trains will carry seventy (70) pounds train line pressure between Muir and Bozeman.

11. Bridge and Engine Restrictions-

At Bozeman and Townsend, engines must not pass over hopper pit of coal docks. At Manhattan, Class W-3 and heavier engines must not use wye. At East Helena, engines heavier than class W will not be used on McClelland Spur. At Logan, engines heavier than Class W not permitted on hopper pit of coal dock.

Bridge 164 Gallatin River—Z-5, Z-6 and Z-7 engines, twenty Bridge 143, near Story-Z-5 engines, twenty (20) MPH.

12. Speed Restrictions-At Livingston, eastward freight trains Speed Restrictions—At Livingston, eastward freight trains eight (8) MPH.

Between Muir and Livingston and between West End and Bozeman, passenger trains, twenty-five (25) MPH on curves when running against the current of traffic descending mountain grade. At Belgrade Tower—Interlocking—Via Manhattan, pass trains, sixty (60) MPH; freight trains, forty (40) MPH. Between Bozeman and Logan via Powers-Thirty-five (35)

Between Bozeman and Logan via Manhattan—Passenger trains sixty-five (65) MPH on straight track, except where restricted to lower rate by engine speed restrictions or other restrictions. See also Mountain Grade Operation and Bridge and Engine Restrictions.

13. Register Stations-

Livingston, Bozeman, Logan, Helena.

East End Helena Yard for westward light engines.

- 14. Register and Clearance Exceptions—At Bozeman and Logan, trains may register by Form 608 and will not require a clearance if train order signal is in "proceed" position.
- 15. Commercial Spurs-

17. Lap Sidings:

Townsend, Winston.

SECOND SUBDIVISION.

(MAIN LINE)

1. At Logan-Train order signal does not govern second subdivision trains.

2. At Whitehall-Station platform will not clear man on steps of cars or engines.

The west switch of the cross-over at the passenger station is the west end of the siding.

- Double Track—The normal position of switches at M. U. Transfer and Butte is for westward track.
- Helper District—Between Whitehall and Butte.
- 5. Yard Limits—Tracks between yard limit signs east of Home-stake and west of Highview will be operated as one yard. Tracks between yard limit signs east of M. U. Transfer and west of Butte will be operated as one yard.
- 6. Mountain Grade Operation—Mountain grade two (2) miles east of Pipestone to two (2) miles east of M. U. Transfer. When trains are directed by train order to meet at Pipestone, Spire Rock, Welch, Homestake, Highview or Skones, the ascending train will unless athermical directed to the district of the seconding train. Rock, Welch, Homestake, Highview or Skones, the ascending train will unless otherwise directed take siding, except that descending light engines will take siding. Freight trains and light engines must not exceed one (1) mile in three (3) minutes and passenger trains one (1) mile in two (2) minutes descending, except passenger trains will use fourteen (14) minutes Homestake to Welch, eleven (11) minutes Welch to Spire Rock and eleven (11) minutes Spire Rock to Pipestone; all trains ascending thirty (30) MPH Pipestone to Homestake and from M. P. 68 east of M. U. Transfer to Homestake.

 Trains handling berry, cherry, lettuce or silk specials will be

Trains handling berry, cherry, lettuce or silk specials will be governed by speed of passenger trains descending mountain

grades. Air brake test will be made in accordance with Rule 1063 before Air brake test will be made in accordance with Rule 1063 before leaving Homestake on westward and Highview on eastward freight trains. The air brake must be charged to a maximum of ninety (90) pounds pressure and conductors must know by caboose gauge that this pressure is attained before making terminal test. Enginemen will maintain a working basis of ninety (90) pounds pressure descending mountain grade. Retaining valves will be used on all loaded and empty cars. Eastward freight trains will stop at Spire Rock to cool wheels and inspect train.

and inspect train.

7. Bridge and Engine Restrictions-

Bridge 51 Spire Rock Viaduct, Bridge 52 Big Pipestone Creek Viaduct, Bridge 63 Ealean Gulch Viaduct—engine classes Z-5, ten (10) MPH; A-2, A-3, A-4, Z-6 and Z-7, thirty (30) MPH. At Logan-Engines heavier than Class W not permitted on hopper pit of coal dock. At Whitehall—Engines must not pass over hopper pit of coal dock.

8. Speed Restrictions-

Between Logan and Whitehall—Passenger trains sixty-five (65) MPH on straight track, except where restricted to lower rate by engine speed restrictions or other restrictions.

At Whitehall—All trains restrict speed to ten (10) MPH over crossing west of coal dock. See also Mountain Grade Operation and Bridge and Engine Restrictions.

9. Register Stations-

Logan, Butte. Whitehall for second class and inferior trains. M. U. Transfer for helper engines; to be telephoned by engineman to operator at Butte.

10. Commercial Spurs—	Miles from	Car
Ingleside	Logan 17.7	Capacity 5
Fisherman		6

THIRD SUBDIVISION. (MAIN LINE)

- At Helena—End of double track is at first cross-over switch west of Roberts Street crossing. Normal position of switch is for eastward track. Between Helena and G. N. crossing, trains must keep to the left unless otherwise instructed by train order.
- 2. At Austin, south siding is, westward siding and north siding is eastward siding.
- 3. At Ventilating Plant—When leaving cars on tail of spur, the switch must be lined for the track leading to the trestle.
- 4. At Blossburg, south siding is eastward siding and north siding is westward siding. Pusher engines in addition to coming to full stop after cutting loose from train will not turn the head light on until the caboose

has passed the telegraph office.

- 5. At Garrison, eastward trains moving against the current of traffic into Garrison will re-enter the eastward main track at crossover just west of telegraph office.
- At Austin and Skyline, the derail switch at the east end of Skyline siding and at the east end of the westward siding at Austin will be kept closed when sidings are clear.
- At Missoula—Westward freight trains will, unless otherwise directed, head into the old yard just east of Woody Street, except when there are conflicting passenger train movements, will head in at Madison Street.
- 8. At Austin, Skyline and Garrison—The east switch of the west-ward siding at Austin, the east switch of the siding at Skyline, and the east and west switches of the cross-over from the third to fourth sub-division at Garrison are dual control. At Austin and Skyline the normal position of the switches is for the main and Skyline the normal position of the switches is for the main track. At Garrison the normal position of the east switch is for the third sub-division and the west switch for the fourth sub-division. Trains finding the Home Signals in "Stop" position will examine the switch and if not in proper position, first throw power lever, then operate switch with the hand throw lever. Power lever must not be returned to normal position until after the final move over the switch is made. Both levers must be left in normal position and locked. If signals still indicate "Stop", trains may proceed, complying with automatic block signal rules.
- 9. Helper District between Helena and Blossburg.
- 10. Pusher District between Garrison and Blossburg,

STAFF BLOCK SYSTEM Between BLOSSBURG AND SKYLINE.

No train will move between Skyline and Blossburg until engineman of the leading engine has received a staff from the operator which must be delivered to the operator at the opposite end of the block. Possession of the staff makes a train superior to all other trains between Skyline and Blossburg.

No eastward train will leave Blossburg, and no westward train will leave Skyline unless the train order signal indicates proceed. When a staff has been delivered to the operator at Skyline or Blossburg, it must not be used for another train movement until it has been passed through the staff machine; and it must not be placed in the staff machine until the rear of the train from which the staff is received has passed the train order signal at least 300 feet and the signal has again been placed at "Stop," unless for any reason the rear of the train does not pass the train order signal, in which event the operator will, upon written advice of the conductor that the Staff Block is Clear, place the staff in the machine.

At Blossburg when westward freight trains have helper engines on rear, the operator will not put the staff in machine until caboose has been dropped onto train and helper engines are

clear of main track.

12. Mountain Grade Operation-Mountain grade East Switch Birds-

eye to Blossburg.

An air test will be made in accordance with Rule 1063 before leaving Garrison or Blossburg. When the test is made at Garrison, a brake pipe test will be made at Blossburg before the retainers are turned up and following the parting of the hose be-tween the helper and caboose. If, for any reason, the brake pipe or hose couplings have been parted after the test is made

at Garrison a terminal test must be made at Blossburg and a second card filled out.

Retaining valves must be used on all loaded cars and on onehalf of the empty cars, alternating the empties, Blossburg to Fort Harrison.

When trains, directed by train order, meet at Birdseye, Austin, Weed or Skyline, the westward train will, unless otherwise directed, take siding. When at Blossburg, the eastward train will, unless otherwise directed, take siding.

When trains meet at Skyline, Weed, Austin or Birdseye, the eastward train, unless otherwise instructed, will not pass the west switch until the westward train is clear of main track.

When eastward freight trains meet first-class trains or passenger extras at Skyline or Austin, operator at meeting point will open upper switch of siding and safety switch before the freight train leaves the station next west of the meeting point and will not close them until the eastward train has stopped; eastward train will not pass safety switch until westward train

When an eastward first-class train, passenger extra or light engine, meets a westward train at Skyline or Austin, operator

will not open safety switch.

Eastward second-class or inferior trains, except light engines or engines with caboose only, will not be permitted to follow first-class trains or passenger extras from Blossburg, Skyline or Austin until the operator at the next office reports the preceding train by, and that the safety switch has been opened.

The normal position of the eastward train order signal at Blossburg, Skyline and Austin will be stop, and the operator will not clear it to allow an eastward movement until assured by the operator at the next station that the safety switch is properly set.

Operators at Skyline or Austin will not open the safety switch for meeting trains until advised by the operator at the preceding station that there is no train ahead of the train for which

the safety switch is to be opened.

Operators at Blossburg, Skyline and Austin must keep a record, beginning at 12:01 A. M., of all eastward trains passing their station and notify the operator at the next station in each direction the departing time of such trains. Eastward secondclass and inferior trains, other than passenger extras and light engines, will obtain a meet order before leaving Blossburg on all superior westward trains, if unable to make G. N. Crossing for such trains.

Operator will close east switches of both sidings at Blossburg after departure of eastward trains. Operators at Austin and Skyline will close the west switch of siding after departure of westward trains.

Eastward second-class and inferior trains, except passenger extras, unless otherwise instructed, will take siding at Blossburg. test air and obtain staff before again using the main track.

The air brakes must be charged to a maximum of ninety "90" pounds pressure on eastward freight trains at Blossburg and conductors must know by caboose gauge that this pressure is attained before making terminal test. Engineman will main-tain a working basis of ninety "90" pounds pressure descending mountain grade.

Eastward freight trains must stop at Austin and Fort Harrison to cool wheels and make inspection.

Passenger trains will use two (2) minutes and thirty (30) seconds thru Mullan Tunnel, and will not exceed any one (1) mile in two (2) minutes and freight trains and light engines any one (1) mile in three (3) minutes, descending.

Passenger trains descending will not exceed twenty-two (22) MPH between Blossburg and Austin, and will use not less than six (6) minutes Blossburg to Skyline, six (6) minutes Skyline to Weed, and nine (9) minutes Weed to Austin. All ascending trains thirty (30) MPH Birdseye to Blossburg. Trains handling berry, cherry, lettuce or silk specials will be governed by speed of passenger trains descending mountain grades. The following instructions govern operation of the ventilating plant east end of Mullan Tunnel:

"When fan is in operation westward freight trains will not exceed a speed of seven (7) MPH through Mullan Tunnel, and when there is a helper engine on rear of train, lead engine will so regulate the speed that the entire train will not exceed this speed through the tunnel.

"If the plant fails, train and enginemen and yard master at Helena will be notified so that helper engines may be turned out of Helena. If the failure of the plant occurs after a train has left Helena, they will be notified by the dispatcher, or if it has departed from Skyline they will be flagged by the en-gineer at the ventilating plant, in which case train and enginemen will arrange to use necessary precaution for personal protection through the tunnel."

13. Speed Restrictions-

Between Garrison and Missoula—Passenger trains sixty-five (65) MPH except where restricted to lower rate by engine speed restrictions or other restrictions.

At Missoula-Twenty-five (25) MPH within city limits. See also Mountain Grade Operation.

14. Register Stations-

Helena Yard, Garrison, Missoula.

15. Register and Clearance Exceptions-At Garrison, trains may register by Form 608 and will not require clearance if the train order signal is in "proceed" position.

16. Commercial Spurs—	Miles from Helena	Car Capacity
Fort Harrison	4.2	2
Rich		6
Calcium	26.7	6
Bradman		9

17. Crossovers:

Garrison, Phosphate, Gold Creek, Jens, Drummond, Bearmouth, Nimrod, Willis, Bonita, Clinton, Bonner, Missoula.

FOURTH SUBDIVISION.

(MAIN LINE)

 Card Train Order (Form AB) will govern the movement of trains between Butte and Silver Bow, and trains must not move in this territory unless conductor and engineman each hold a card properly filled out.

At Silver Bow the normal position of eastward train order signal is "stop" and must not be cleared except for delivery of card without restrictions. If an eastward train is to meet an opposing train at Silver Bow it must be brought to a stop before card is delivered.

- 2. At Durant-Station platform will not clear man on steps of car or engine.
- 3. At Garrison-Train order signal does not govern fourth subdivision trains.
- Bridge and Engine Restrictions—Bridges 11.1 and 11.2 Silver Bow Creek; Bridge 21.0 Deer Lodge River, engines Class 2-5 thirty (30) MPH.
- 5. Speed Restrictions

At Butte-Fifteen (15) MPH within the city limits.

At Dempsey—Interlocking—Passenger trains sixty (60) MPH. Eastward freight trains forty-five (45) MPH. Westward freight trains fifty (50) MPH.

Register Stations—Butte, Garrison. Silver Bow for UP trains.

7. Commercial Spurs-	Miles from Butte	Car Capacity
Rocker		20

FIFTH SUBDIVISION.

(MAIN LINE)

- -Between Missoula and Paradise will run via 1. Extra Trains-Fifth Subdivision unless otherwise instructed by train order.
- At Missoula—Spring switch at west end of lead, trailing from old yard to westward main track.

3. At Rivulet-South siding will be used as single siding.

4. At Paradise-Trains arriving Paradise, before heading out on main track through crossover in making move to coal dock, must secure a check of register by train order, or Form 602 from operator.

 Bridge and Engine Restrictions—Class Z-5 not permitted.
 Bridges 122 and 122.1 near Missoula stock yard, engines Classes Z-6 and Z-7 forty (40) MPH.
 Bridge 122.2, Grant Creek, Engines Classes Z-6 and Z-7 twenty (20) MPH.
Bridge 168, Engines Classes A-2, A-3, A-4, Z-6 and Z-7 twenty
(20) MPH.
Bridge 179, Trout Creek, Engines Classes A-2, A-3, A-4, Z-6 and Z-7 ten (10) MPH.

6. Speed Restrictions-At Missoula—Twenty-five (25) MPH within city limits. At Huson—Interlocking—Passenger train sixty (60) MPH. Freight trains fifty (50) MPH.

7. Register Stations-Missoula and Paradise.

8. Commercial Spur

merciai Spurs	Miles from Missoula	Car Capacity
Grass Valley	8.7	19
Mellady	13.9	4
Huson	22.1	17

SIXTH SUBDIVISION. (MAIN LINE)

- 1. At DeSmet-Standard switches at east end of east cross-over and at west end of west cross-over are normally lined for the cross-over. Spring switches at west end of east cross-over and east end of west cross-over are normally lined for movement from the 5th sub-division to eastward main track. A train from the 5th sub-division being passed by a train from the 6th sub-division or vice versa, or a train standing on the westward main track to meet a train from the 6th sub-division, will operate the release in order to give the train being met or passed a clear route.
- At Arlee--Normal position of switch at east end of siding is for house track.
- 3. At Ravalli-Normal position of switch at west end of siding is for house track.
- At Paradise-House track in rear of passenger station will be used as siding for first class trains and passenger extras.
- Extra Trains between Missoula and Paradise will run via Fifth Subdivision unless otherwise instructed by train order.
- 6. Helper District-Between Missoula and Arlee.

7. Mountain Grade Operation—Mountain grade one (1) mile west of DeSmet to two (2) miles east of Ariee. When trains meet at Nagos, the eastward train, unless otherwise instructed, will not pass the west switch until the westward train is clear of main track; at Schley, the westward train, unless otherwise instructed, will not pass the east switch until the eastward train is clear of the main track.

When trains directed by train order, meet at Nagos or Schley, the ascending train will unless otherwise directed take siding; when at Evaro, the westward train will unless otherwise directed take siding.

On freight trains air brake test will be made in accordance with Rule 1063 before leaving Evaro.

The air brakes must be charged to a maximum of ninety (90) pounds pressure at Evaro and conductors must know by caboose gauge that this pressure is attained before making terminal test. Enginemen will maintain a working basis of ninety (90) pounds pressure descending mountain grade.

Retainers must be used on all cars Evaro to Reid Spur and from Evaro to two miles east of Arlee.

Passenger trains must not exceed any one (1) mile in two (2) minutes, freight trains and light engines any one (1) mile in three (3) minutes descending.

All ascending trains thirty (30) MPH from one (1) mile west of DeSmet to Evaro and from MP 19 east of Arlee to MP 12. Trains handling berry, cherry, lettuce or silk specials will be governed by speed of passenger trains descending mountain grades.

8. Bridge and Engine Restrictions— Engine Classes A-2, A-3, A-4, Z-3, Z-4, Z-5, Z-6 and Z-7 not per-Bridge 7 Marent Trestle—Double header engine Classes A, A-1 and Z-2 not permitted. Classes A, A-1, Z-2, W-3 and W-5 engines, twenty (20) MPH. Classes W-3 and W-5 engines must never be coupled to the tender of a Class A or A-1 engine. Bridge 55 Over Flathead River-Doubleheader engine Classes A, A-1, W-3 and W-5 not permitted. Single A and A-1 or with head end helper, Classes W, W-1, W-2, W-4, Q-5 or Q-6 and doubleheader Classes Q-5 and Q-6, ten (10) MPH. Single Q-5, Q-6, W-3, W-5 and Z-2 and single or doubleheader Classes T, W, W-1, W-2 and W-4, twenty (20) MPH.

9. Speed Restrictions—See Mountain Grade Operation and Bridge and Engine Restrictions.

10. Register Stations-Paradise. Arlee for helper engines.

11. Clearance Exceptions— At DeSmet—Trains will not require a clearance if the train order signal is in "Proceed" position.

EIGHTH SUBDIVISION.

(PARK BRANCH)

- 1. At Electric-Siding is one (1) mile west of station.
- 2. Bridge and Engine Restrictions-Engines A-2 and heavier not permitted.
- 3. Speed Restrictions-Forty (40) MPH, except ten (10) MPH on circle at Gardiner.
- 4. Register Stations-Livingston, Gardiner.
- 5. Commercial Spurs-

	Miles from	Car
	Livington	Capacity

FOURTEENTH SUBDIVISION. (FLATHEAD VALLEY BRANCH)

- Train order signal does not govern fourteenth subdivision trains.
- Speed Restrictions—Passenger trains thirty (30) MPH and freight trains, twenty-five (25) MPH.
- 3. Register Stations-Dixon. Polson.

FIFTEENTH SUBDIVISION. (COEUR D'ALENE BRANCH)

- At St. Regis—Train order signal does not govern fifteenth sub-division trains.
- At Lookout—Freight trains and light engines will follow passenger and freight trains in either direction twenty (20) minutes.
 Passenger trains will follow freight trains or light engines in either direction fifteen (15) minutes.
- 3. Helper District-Between Saltese and Wallace.
- 4. Mountain Grade Operation—Mountain grade between Saltese and Mullan. Air brake test will be made in accordance with Rule 1063 before leaving Lookout.

 Safety switch at foot of four per cent grade at Sohon and Dorsey will be kept set and locked for main track, except when doubling trains to Lookout, when switches will be opened between band and year partian of train tween head and rear portion of train.

The air brakes must be charged to a maximum of ninety (90) pounds pressure on freight trains at Lookout, and conductors must know by caboose gauge that this pressure is attained be-fore making terminal test. Enginemen will maintain a work-ing basis of ninety (90) pounds, Lookout to Saltese and Lookout to Mullan.

Train and enginemen using the Hercules high line at Wallace must leave a flagman at the foot of the grade to protect return movement. Train and enginemen must at all times expect to find a flagman at this point.

Passenger trains will not exceed any one (1) mile in two and one-half (2½) minutes and freight trains any one (1) mile in four (4) minutes and light engines any one (1) mile in three (3) minutes descending

All trains ascending twenty-four (24) MPH, mile post 32 to Lockout and Mullan to Lockout.

When trains directed by train order meet at Larson, Dorsey or Lookout, the eastward train will take siding. When at Taft the westward train will take siding.

Retaining valves must be used on all cars Lookout to Saltese and Lookout to Mullan.

- 5. Bridge and Engine Restrictions—
 Engines Classes A, A-1, A-2, A-3, A-4, Z-2, Z-3, Z-4, Z-5, Z-6 and Z-7 not permitted, except Z-3 engines 4020, 4021 and 4025. All Classes W engines not permitted Taft to Wallace. Bridge 57 South Fork of Coeur d'Alene River—Wallace Yard. Engines classes heavier than Z-3 not permitted. Classes Q-5, Q-6, W-3, W-5, Z-2 and Z-3 five (5) MPH. Classes Q-4, S-4, T and W and lighter, ten (10) MPH. Bridge 57-A opposite Bridge 57—Also scales just east of Bridge 57-A all engines harred. 57-A, all engines barred.
- 6. Speed Restrictions Passenger trains thirty (30) MPH and freight trains twenty (20) At Wallace, six (6) MPH over public crossings. See also Mountain Grade Operation and Bridge and Engine Restrictions.
- 7. Register Stations-St. Regis. Haugan. Wallace. Lookout. Saltese for helper engines.
- 8. Commercial Spurs-

ALL SUBDIVISIONS.

- Transportation Rule 11 is modified as follows: A train finding a fusee burning on or near its track may proceed at restricted speed without stopping.
- Lights will be displayed at night on all main line train order signals. On Branch line sub-divisions where lights are not dis-played on day-office train order signals, all trains will positively ascertain position of signal and be governed by the day indication.
- 3. Transportation Rule D-97 applies to all divisions.
- 4. Transportation Rule 105 is modified as follows: When a siding of an assigned direction is blocked with cars, or taken out of service for any reason, the siding of the opposite direction will be used as a single siding. At lap sidings, unless otherwise provided, trains taking siding must head in at the lap.
- 5. IN AUTOMATIC BLOCK SIGNAL TERRITORY:--When mov-IN AUTOMATIC BLOCK SIGNAL TERRITORY:—When moving with the current of traffic, or on single track, where the automatic block signals governing the track in use are of the sema-phore type and can be plainly seen from the rear of a standing train to be at stop, such signal being not less than one-half mile from the rear of such train, it will not be necessary to protect the train by a flagman. Under all other circumstances Rule 99 must be observed. must be observed.

Transportation Rule 501-B is modified as follows: INDICATION —Approach next signal prepared to stop. Block is clear; second block in advance is not clear.

Transportation Rule 509(B) is modified as follows: It must be understood that such signal indication may be due to an opposing train proceeding into the same block at the opposite end under an approach signal indication Rule 501-B and before proceeding into the block every precaution consistent with running orders and the nature of the track ahead should be taken to insure sets movement through the block. sure safe movement through the block.

When a train dispatcher desires to advance a train from a station where by rule it should enter the siding before passing a train order office, he may instruct the operator to use white signal as prescribed by Transportation Rule 12-c. The engineman may then continue to move his train on the main track to the signal at restricted speed and there be governed by train orders that are addressed to his train.

Transportation Rule 606: Emergency Signals are not used at interlockings or drawbridges operated by the Northern Pacific

- Transportation Rule 728 is modified as follows: The red flag Transportation Rule 728 is modified as follows: The red flag by day, and in addition the red light at night, will be placed twenty (20) rail lengths distant from the point of obstruction instead of fifty (50) rail lengths. The flagman will be located with the yellow signals, one mile distant beyond the red signals. On the approach of a train the flagman will display the yellow signals, which must be acknowledged by the enginemen in accordance with Rule 14(g). On all branch lines and on the Bozeman-Logan low line, the yellow signals will be placed as prescribed and the flagman will not be required, except during fog, storms or otherwise bad weather.
- 8. Transportation Rule 1062 requiring the making of running brake test on passenger trains must also be observed on all passenger trains following departure from terminals, or from a station at which either train or engine crews, or both of them, have been changed or where switching has been done. Engineman will acknowledge proceed signals of trainmen by two short blasts of the which the whistle.
- 9. When a siding is to be used temporarily as a main track, the switches will be set and locked for the siding and must be protected by flagman until train order covering the movement is issued to all trains and the section foreman of that section notified; the flagman to remain until released by the train dispatcher.
- Helper engines waiting to help trains will keep clear of main track until train to be helped has arrived and stopped.
- In case of failure of communicating signal system on passenger trains, and on freight trains when conditions permit, enginemen will receive "proceed" signal before passing any station.
 SPEED RESTRICTIONS—Except as otherwise provided: Passenger trains, sixty (60) MPH. Freight trains, fifty (50) MPH, except when restricted to lower rate of speed by engine speed restriction.

ENGINES—All Q and P Classes, and Classes S-4 and T, sixty (60) MPH, except when used on passenger trains where higher speed is authorized; Z-6 and Z-7, sixty (60) MPH, other Z classes, thirty-five (35) MPH. All other classes fifty (50) MPH. Switch engines under steam, moving between stations, fifteen (15) MPH. ALL TRAINS AND ENGINES—Fifteen (15) MPH through crossovers, turnouts and gauntlets; twenty-five (25) MPH passing telegraph offices where orders are delivered; thirty (30) MPH when handling steam wrecking derrick, pile driver or locomotive grape.

To avoid damage to rail and bridges by moving locomotives hav-ing main or side rods down, over the road at too high a speed, the following speeds will be maximum permitted:

On Main Line—		
With main and side rods removed:		
All A. and Q classes	30	MPH.
All other classes		
With main rods removed and side rods in place:		
All A and Q classes	35	MPH.
All other classes	30	MPH.

On Branch Lines With either or both main and side rods removed: All other classes 20 MPH. Over Bridges-Main or Branch Line MPH.

Engines with either or both main and side rods removed shall Engines with either or both main and side rods removed shall not be moved over any bridge at a speed in excess of 20 MPH and the speed shall be further reduced over bridges which carry speed restrictions against the class of power being so moved. In the latter case, the speed of an engine with rods removed shall be reduced over the bridge to one half the restricted speed for that engine in working order, as shown under "Bridge and Engine Restrictions."

Dead engines with all rods up or in place, the piston rod being parted from the crosshead and removed and the valve motion disconnected and blocked, may be moved in trains at not to exceed the permissible speed of freight trains operating in the territory over which such engines are moved.

Bridge or other restrictions applicable to these engines when in operating condition to be observed.

For engines coming from the shop, to prevent running hot authorized maximum speed is:

All A and Q Classes35 MPH 13. Bridge Restrictions for Single and Double Header Engines— Where no mention is made of single or double heading, the instructions apply alike to single and double header engines of An engine of any class doubleheaded with an engine of lighter class will carry the same restrictions as if the heavier engine was doubleheaded with its own class, unless instructions to the contrary have been issued.

14. SPRING SWITCHES:

Maximum speed for all facing point and trailing point movements through switch fifteen (15) MPH. Trailing movements on the track for which the switch is normally lined may be made at normal speed.

Trains trailing through or stopping on a spring switch must not back up or take slack until points have been thrown by hand. Flying switches over or through spring switches are prohibited. When operated by hand, lever must be moved slowly, keeping a steady pressure on the handle until the switch is thrown and the handle is in the notch on the switch stand provided for it. When signal governing block in which spring switch is located is at stop, or where automatic block signals do not govern ac-count trains running against current of traffic, facing point movements must not be made over switch until points have been examined. Sand must not be used over points of spring switches.

- 15. Before moving a work or wrecking train, the whistle signal (14-b) or (14-h) must be sounded for the protection of men working about such trains.
- 16. Gas-electric motor cars, when handled in freight trains, must be behind caboose. Test of hand brakes of gas electric motor cars must be made once each trip. If crew has charge of moving car prior to leaving initial station, test will be made during such movement; otherwise, as soon as possible after leaving initial station. On cars equipped with "Deadman's Control", conductor and engineman will cooperate in making test.

17. Precautions must be taken on double track to prevent accidents from swinging doors or other loose construction attached to cars or locomotives.

On double track, trains handling logs will not be permitted to meet passenger trains between stations. Conductors will notify Train Dispatcher when there are logs in their trains and secure train order that passenger trains will be held at next station until they have arrived. On single track, trains handling logs when meeting passenger trains will not proceed unless the passenger train is standing still or has moved by the log cars. Conductors of all trains picking up logs must know personally that cars are not overloaded or improperly loaded and are safe to move without loss of lading.

- 18. Cranes, derricks, steam shovels, mining machinery, etc., moving either on their own wheels, or on cars, with or without booms attached, must be moved with boom trailing except when necessity requires otherwise.
- 19. Pusher engines must not push on cabooses not equipped with steel sills.
- 20. BULLETIN STATIONS:-Livingston, Bozeman, Logan, Whitehall, Butte. Helena, Garrison, Missoula, St. Regis, Wallace, Paradise. Silver Bow—for Union Pacific trains.
- STANDARD TIME CLOCKS:— Livingston, Bozeman, Logan, Whitehall, Butte, Helena, Garrison, Missoula, Wallace and Paradise.

WATCH INSPECTORS:-H. N. Hull, Livingston. S. V. Justus, Whitehall. S. V. Justus, Whitehalf.
H. M. Hueman, Wallace.
