Plains to Haron, Montana.

Estimated cost of the plates placed in connection with Form AA curve relays.

A.F. 103-24 provided for the plates to be used in connection with the curve relays. This improvement was closed out at the end of the year in accordance with the instructions that the plate A.F. should not be carried over into another fiscal year. The curve relays however had not been completed, and when completed in 1926, the plates were used and released as shown below. A new A.F. will therefore be needed in order that the accounting may be properly handled.
